UNIVERSITY OF COLORADO **BOULDER**

February 2024

# Executive Summary

This economic impact study is intended to measure the contributions of the nonprofit industry to Colorado’s economy. Study findings may assist policy makers, business leaders, and the public in understanding how to better leverage nonprofits through knowledge of the industry’s economic impacts.

## Summary of Findings

In 2021, the most recent year for which comprehensive data are available, the nonprofit industry generated more than \$62 billion in total economic output (Figure 1). This includes a \$25 billion contribution to gross domestic product (GDP), and nearly \$20 billion in labor income from jobs supported by the industry. Also included in the \$62 billion amount is an estimated \$9.3 billion in value added from volunteerism. Nonprofits collected more than \$28 billion in revenues and held more than \$34 billion in assets in 2021.

A total of 262,000 jobs were supported by the industry in 2021. This includes 182,000 jobs through direct employment, 54,000 jobs in business-to-business activities, and another 26,000 induced jobs through household spending associated with employee earnings. Overall, the nonprofit sector directly and indirectly supports an estimated 9.7% of the state’s jobs.

**Figure 1. Colorado Nonprofit Economic Impact Estimate Summary, 2021**

<b>Impacts</b>	<b>Employment</b>	<b>Labor Income</b>	<b>Value Added</b>	<b>Total Output</b>
Direct	182,000	\$14.2 billion	\$15.5 billion	\$36.4 billion
Indirect	54,000	\$4.0 billion	\$6.9 billion	\$12.1 billion
Induced	26,000	\$1.5 billion	\$2.7 billion	\$4.5 billion
<b>Totals</b>	<b>262,000</b>	<b>\$19.7 billion</b>	<b>\$25.0 billion</b>	<b>\$53.0 billion</b>
			Value Added from Volunteerism	\$9.3 billion
			<b>Total Economic Impact</b>	<b>\$62.3 billion</b>

## Study Objectives

The purpose of this study is to measure the contributions of the nonprofit industry to the state’s economy as a whole and regionally, and to communicate the nonprofit industry’s economic value in the context of the broader state economy. Key economic measures included in analysis are:

- the size and composition of the nonprofit sector in Colorado, its growth, and comparisons to other sectors based on direct industry employment and GDP;
- the financial capacity of the industry, as measured by nonprofit revenue, spending, and assets;
- sources of revenue to nonprofits, including federal government support, foundation grants, and individual contributions; and
- the indirect and induced impacts of employment, labor income, and value added to measure the extent to which direct economic impacts of nonprofits ripple through the economy.

The following presents an analysis and findings from the study. The data and methodology used in this analysis are summarized in Appendix A, and detailed data tables are provided in Appendix B.

## Analysis & Findings

A summary of study findings and analysis is presented below, first by detailing the economic data used to estimate direct industry impacts, including employment, labor income, spending, and volunteer value added. Next, the economic impacts, including direct, indirect, and induced impacts are summarized. Economic activity among nonprofits and other industries is then compared. Finally, direct regional impacts are summarized.

### Nonprofits Economic Data

#### Number of Nonprofits

At the time of analysis, 34,251 nonprofit organizations were registered in Colorado with the Internal Revenue Service (IRS) as federal income tax exempt organizations. About a third of these nonprofits file tax returns using Form 990, 990-EZ, or 990-PF each year. For organizations for which filing data are available, the share of total nonprofits and amount of assets held is summarized in Figure 2 and in Appendix Table B-1 based on National Taxonomy of Exempt Entities (NTEE) codes. The largest share of nonprofit economic activity falls under education-related activities (21.9% of assets and 11.8% of nonprofits) followed by health-related activities (14.7% of assets and 3.7% of nonprofits).

**Figure 2. Nonprofit Shares by NTEE Category Grouping, 2021**

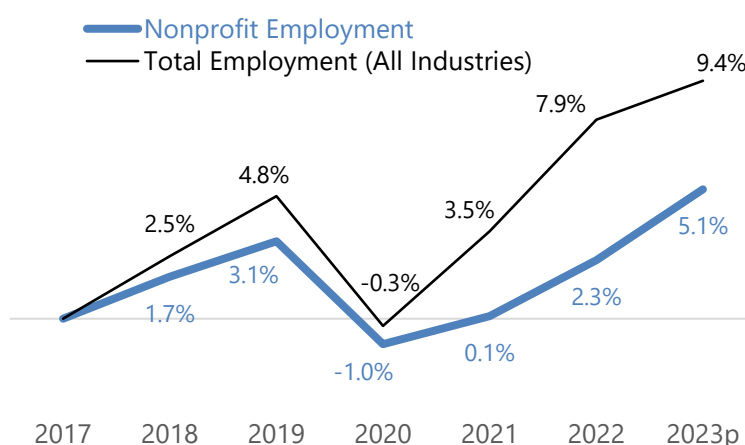

Source: IRS Form 990, 990-EZ, and 990-PF data based on EIN mapping to the Colorado EO BMF. Includes all exempt organizations that map across data sources.

While Figure 1 illustrates the broader population of nonprofits for which data are available, as outlined in the methodology section of this study (Appendix A) a subset of this nonprofit population was used to estimate economic impacts of nonprofits to minimize the occurrence of double-counting of economic impacts and to exclude out-of-state activity. Data on the number and economic contributions of nonprofits included in economic impact analysis estimates are summarized in Appendix Tables B-2 through B-12.

## Employment

Private sector Colorado nonprofits directly employed 182,400 workers in 2021, 6.8% of total covered employment.<sup>1</sup> The nonprofit sector underperformed most other industries in jobs growth during the recovery from the 2020 recession (Figure 3). Surveys and available data<sup>2</sup> suggest that the COVID-19 pandemic contributed to subdued nonprofit funding, higher expenses, and significant disruptions to the provision of in-person services due to health and safety concerns. This prompted many nonprofits to reduce their payrolls in 2020. All the while, demand for many of the services offered by nonprofits, such as health-related services, increased dramatically during the pandemic. As the pandemic has eased, labor shortages continue to restrain industry growth with many job vacancies going unfilled. Ongoing budget constraints, competition with other industries paying higher wages, and burnout are cited among the top barriers affecting recruitment in 2022 and 2023.<sup>3</sup>

**Figure 3. Job Growth from 2017 Levels**

Source: U.S. Bureau of Labor Statistics, QCEW & authors' estimates.  
p = Preliminary, based on the first two quarters of 2023.

## Financial Capacity: Revenue, Expenditures & Assets

In 2021, the nonprofit sector generated at least \$28 billion in revenues, spent more than \$24.5 billion, and held \$35 billion in assets (Figure 4). These amounts represent a lower bound of industry activity because they are limited to independent Colorado organizations to exclude activity occurring outside of Colorado. They also exclude foundations to avoid double-counting amounts (e.g., foundations who grant money to other nonprofits who subsequently spend those dollars). Foundation financial capacity estimates are presented separately below.

Most nonprofits expect expenditures to increase in the coming budget year, while revenue is expected to remain constant. In the 2023 nonprofit survey<sup>4</sup>, a majority of respondents expected funding (57.3%) and reserves (66.4%) to remain roughly the same in the next budget year. Of the remaining respondents, 29.4% expected increases, while 13.3% expected decreases in funding. A majority of respondents (78%) expected substantial changes beyond inflationary increases for some expenditures in the coming budget year.

<sup>1</sup>Total covered employment summarizes employment covered by unemployment insurance. Data are collected by the Colorado Department of Labor and Employment (CDLE) and aggregated data is publicly reported by the U.S. Bureau of Labor Statistics.

<b>Totals</b>	<b>8,841</b>	<b>100%</b>	<b>\$27,978.3</b>	<b>\$24,446.7</b>	<b>\$34,918.2</b>

Source: IRS EO BMF data merged with Form 990 and 990-EZ data.

\*Data are limited to independent non-foundation nonprofits.

\*\*Expenditures include only amounts from Form 990 data and exclude a portion of labor earnings included in total economic impact estimates for nonprofits with employment in Colorado.

## Foundation Grants

Based on available data, more than 2,000 active Colorado foundations contributed more than \$1.4 billion in grants in each of 2020 and 2021.<sup>5</sup> Foundation spending reached nearly \$2 billion in 2021, while assets amassed to nearly \$20 billion (Figure 5). These estimates provide a lower bound to foundation activity as they are limited to independent Colorado foundations to exclude economic activity from non-independent foundations with inter-state activity, a portion of which may occur outside of Colorado. Amounts also exclude government foundations, such as those affiliated with state colleges and universities or hospitals.

**Figure 5. Independent Nonprofit Foundation Financial Capacity, 2021\***  
Dollars in Millions

Asset Category	Nonprofits		Financials			
	Count	Share	Revenue	Spending	Grants	Assets

<b>Totals</b>	<b>2,052</b>	<b>100%</b>	<b>\$2,959.3</b>	<b>\$1,997.8</b>	<b>\$1,423.3</b>	<b>\$19,990.4</b>

Source: IRS EO BMF data merged with Form 990, 990-EZ, and 990-PF data.

\*Data limited to independent foundations. Estimate based on 2019 Form 990-PF data and 2021 Form 990 data.

<sup>5</sup> At the time of analysis, Form 990-PF (private foundations) data were only available for tax filing that occurred in calendar years 2020 and 2021. Estimates are based on Form 990 data and available Form 990-PF data, which had comprehensive data for tax year 2019 and partial data for tax years 2020 and 2021.

## Funding & Revenue Sources

Respondents to the survey of nonprofits conducted in 2023 reported a majority of funding from sources located in Colorado. About a third of funding was reported to be from private companies, donors, or foundations; 38.5% was reported from federal sources; and the remaining less than a third from other sources (Figure 6).

**Figure 6. Colorado Nonprofit Funding Sources, 2023**

<b>Funding Source</b>	<b>Share</b>
Federal funding	38.5%
Private individuals/donors	16.9%
Foundations and Trusts	13.4%
Other nonprofits (non-foundations)	4.1%
Private companies or corporations	3.5%
Universities	0.3%
Other sources	23.3%
Totals	100.0%

Source: 2023 Colorado nonprofits survey.

Figure 7 summarizes Colorado nonprofit revenue sources from Form 990 data. Based on these data, a majority of revenue to nonprofits is generated through program revenue streams, about a third is from contributions, and the remaining 6.7% is from a range of other sources. Program revenue was the strongest contributor to funds among nonprofits with asset categories exceeding \$5 million. Contributions were the highest share among nonprofits with smaller asset classes.

**Figure 7. Nonprofit Revenue Sources, 2021\***

<b>Revenue Source</b>	<b>Share</b>
Program revenue	60.9%
Contributions (all sources)	32.4%
Net asset sales	2.7%
Investment income	1.2%
Royalties	0.7%
Net inventory sales	0.6%
Net rental income	0.1%
Miscellaneous other	1.5%
Total	100.0%

Source: Source: IRS EO BMF data merged with Form 990 data.

\*Data are limited to independent non-foundation nonprofits.

## Economic Output (Direct Spending)

The nonprofit sector accounted for an estimated \$36.4 billion in direct spending in Colorado in 2021. From 2017 through 2021, Colorado nonprofits had cumulative spending of \$134.6 billion. In 2021, \$14.2 billion (39%) of the \$36.4 billion in direct spending is attributable to labor income. Direct spending can occur through labor income paid to nonprofit employees, purchases for nonprofit operations and the provision of services, and grants to recipient populations.

Based on available Form 990 data, the largest shares of direct spending are attributable to health-related (33.5%) and education-related (11.5%) nonprofits (Appendix Table B-10). Regionally, the highest shares of total direct spending occurred in Colorado's population centers, including Denver

(22.7%), Arapahoe (13.1%), El Paso (9.3%), Adams (9.2%), and Larimer (8.3%) counties. As a share of GDP, direct spending had significantly larger impacts in many rural areas of the state (see Figures 11 and 12 and Appendix Table B-6).

### Value-Added from Volunteerism

Volunteers who contribute their time and expertise to nonprofit efforts provide significant value-added to the state of Colorado. Based on data from the 2023 nonprofit survey, it is estimated that in 2021 the sector leveraged over 150,000 full-time equivalent volunteers, who contributed 313 million hours of their time during the year.<sup>6</sup> Based on the average hourly compensation of employees<sup>7</sup>, this volunteerism contributed an estimated \$9.3 billion in value-added in 2021. While most of this amount will not show up in economics statistics because it represents uncompensated volunteerism, a portion of the value added may eventually be monetized (e.g., volunteer hours contributed to home construction or improvements and a subsequent sale of the home).

### Economic Impacts

In 2021, direct spending (\$36.4 billion) by the nonprofit sector supported \$53 billion in total economic activity in Colorado (including the \$36.4 billion direct, \$12.1 billion indirect, and \$4.5 billion from induced household spending). Indirect spending includes business-to-business activity, while induced spending represents household spending from employee earnings attributable to labor demand from the nonprofit industry. In addition to the \$53 billion total economic impact, the value added from volunteerism contributes an estimated additional \$9.3 billion above these amounts. Figure 8 summarizes Colorado nonprofit economic impacts.

The nonprofit sector directly employed 182,000 workers in 2021 and supported an additional 54,000 indirect jobs from business-to-business activity and 26,000 induced jobs from household spending associated with employee earnings attributable to the nonprofit sector. In total, the industry supported 262,000 jobs in the state.

Excluding intermediate inputs, the nonprofit sector supported \$25 billion in value added in 2021, representing 5.6% of the state's GDP. Direct labor income was estimated at \$14.2 billion in 2021, and total labor income was \$19.7 billion, including indirect and induced employee earnings.

**Figure 8. Colorado Nonprofit Economic Impact Estimate Summary, 2021\***

<b>Impacts</b>	<b>Employment</b>	<b>Labor Income</b>	<b>Value Added</b>	<b>Total Output</b>
Direct	182,000	\$14.2 billion	\$15.5 billion	\$36.4 billion
Indirect	54,000	\$4.0 billion	\$6.9 billion	\$12.1 billion
Induced	26,000	\$1.5 billion	\$2.7 billion	\$4.5 billion
<b>Totals</b>	<b>262,000</b>	<b>\$19.7 billion</b>	<b>\$25.0 billion</b>	<b>\$53.0 billion</b>
			Value Added from Volunteerism	\$9.3 billion
			<b>Total Economic Impact</b>	<b>\$62.3 billion</b>

Source: Authors' estimates based on data from the IRS EO BMF, Form 990, 990-EZ, and 990-PF, and CDLE QCEW.  
\*Estimates are limited to independent non-foundation nonprofits.

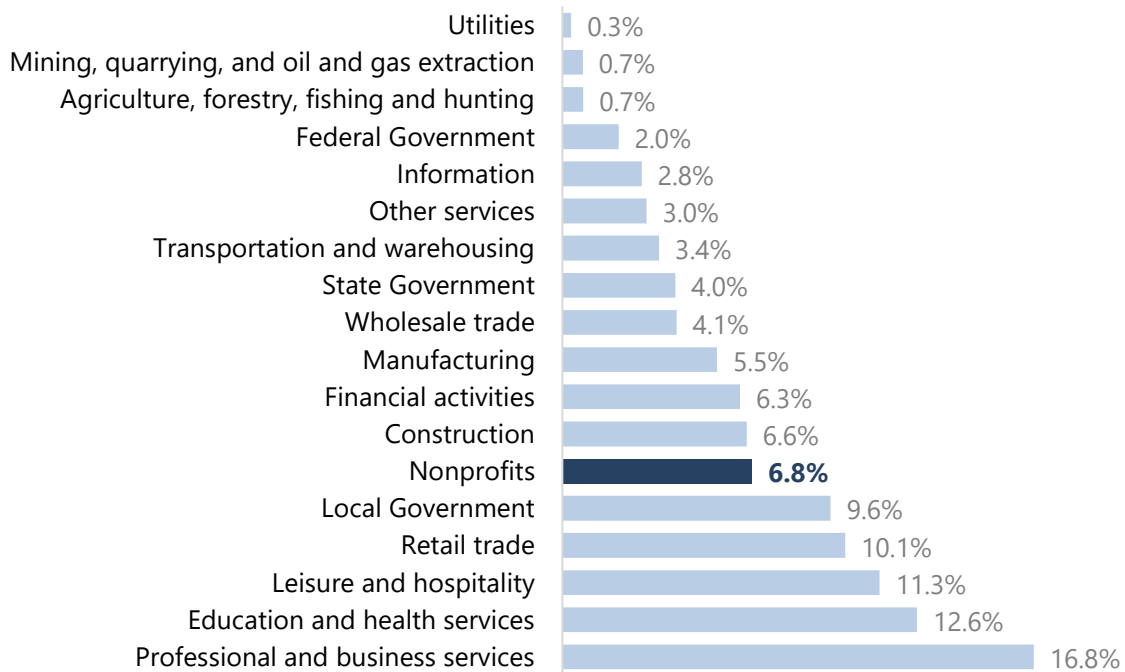

<sup>6</sup> Estimates are extrapolated from available survey data, which is subject to error. Actual volunteer hours may differ from estimates.

<sup>7</sup> In 2021, the value of volunteer time is estimated at \$29.95 per hour for the U.S., the annual average hourly earnings (non-seasonally adjusted) for all production and non-supervisory workers on private non-farm payrolls based on data published by the U.S. Bureau of Labor Statistics. Annual estimates are published by Independent Sector and available at: <https://independentsector.org/resource/value-of-volunteer-time/>

## Comparisons to Other Industries

As a portion of all jobs by industry, the nonprofit sector directly supports 6.8% of all Colorado employment (Figure 9). The industry employs more than the agriculture, mining, and information industries combined, and more than most industries individually.

**Figure 9. Direct Employment by Industry, 2021**

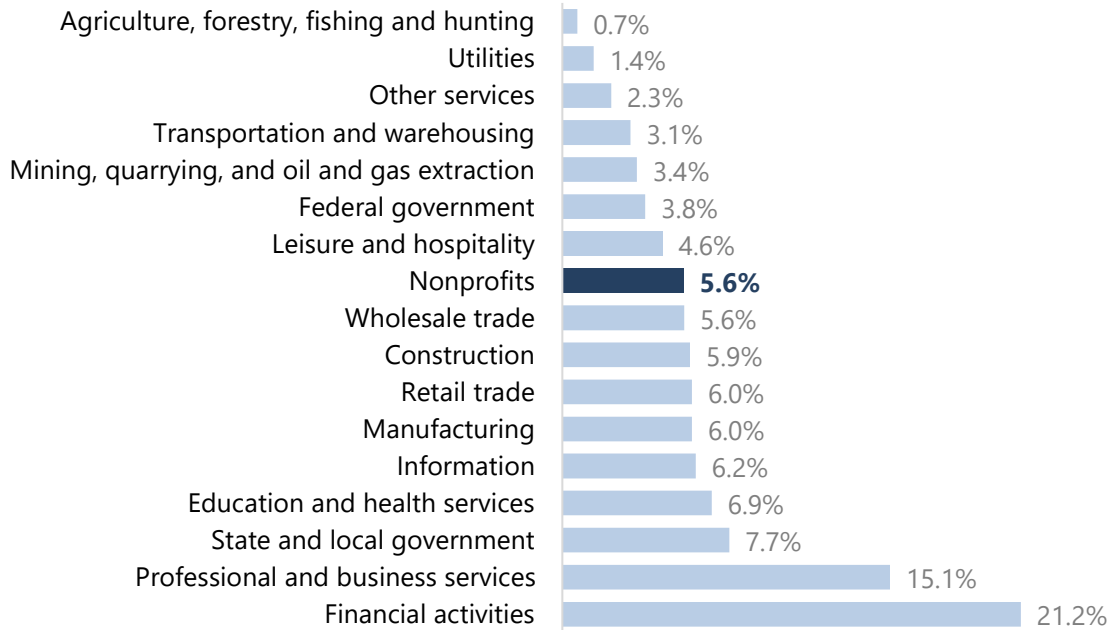

Source: Authors' estimates of nonprofit employment and U.S. Bureau of Labor Statistics, QCEW.  
Note: Shares do not sum to 100% because nonprofit employment is included in other sectors.

In terms of direct value added, the nonprofit industry's \$25 billion in direct spending comprises 5.6% of the state's GDP (Figure 10). The industry's direct spending impact is larger than that of the leisure and hospitality sector in Colorado, which includes economic activity attributable to the state's restaurants, hotels, and arts and entertainment firms.

**Figure 10. Nonprofit Value Added & Gross Domestic Product (GDP) by Industry, 2021**

Source: Authors' estimates of nonprofit value added & U.S. Bureau of Economic Analysis.

Note: Shares do not sum to 100% because nonprofit contributions to GDP are included in other components of GDP.

## Regional Impacts

Figures 11 and 12 illustrate nonprofit jobs in terms of total jobs distributed across the state and as a share of total county employment, respectively. County employment data are also summarized in Appendix Table B-4.

County-level nonprofit jobs largely coincide with Colorado's population centers, concentrated primarily along the Front Range and I-25 corridor. However, nonprofit employment provides meaningful shares of employment across counties, with the highest shares of total jobs among individual counties concentrated in the southwest mountain, San Louis Valley, and Western Slope regions.

Figures 13 and 14 illustrate county-level nonprofit expenditure impacts by level and expenditures as a share of county GDP, respectively. Like employment, nonprofit expenditure levels are highest in Colorado's most populated regions of the state. As a share of GDP, several rural counties show nonprofit spending as a significant share of economic activity.

Notably, caution should be taken when evaluating any single county's estimates, as economic activity is regional and not isolated to the county boundaries within which nonprofit addresses are located.

**Figure 11. Direct Nonprofit Employment by County, 2021**

Source: CDLE QCEW employment based on EIN mapping to IRS EO BMF and Form 990, 990-EZ, and 990-PF data.

Source: U.S. Bureau of Economic Analysis & authors' estimates using IRS EO BMF and Form 990, 990-EZ, and 990-PF data.

Note: Location data are based on the address of the nonprofit. The actual location of economic activity may differ.

## Appendix A: Methodology & Technical Documentation

Economic impact analysis is a widely accepted research approach used to better understand and measure the effect of an industry or event on a regional economy. The approach typically uses an input-output methodology to identify inter-industry linkages to estimate *indirect* and *induced* (“multiplier”) impacts resulting from the *direct* costs and labor associated with the industry or event. Economic impact analysis only incorporates quantifiable economic impacts and does not include intangible impacts, such as improvements in public health or quality of life.

**Definitions.** The economic impacts estimated in this analysis are defined below.

Impact Type	Direct	Initial economic activity by an industry (e.g., sales, expenditures, employment).
	Indirect	The upstream (backward) economic activity impacted by purchases along an industry supply chain.
	Induced	Purchases resulting from the additional incomes from labor demand.
Economic Measures	Value Added	The contribution of an industry to total gross domestic product (GDP). Equals gross output, net of intermediate input costs.
	GDP	The total value added by resident producers of final goods and services.
	Gross Output	The total value of production. Unlike GDP, includes intermediate goods and services.
	Employment	Jobs (headcount) in one year.

**Data sources.** *Direct* impacts of the Colorado nonprofit industry were estimated based on available Internal Revenue Service (IRS) data, including the Exempt Organizations Business Master File Extract (EO BMF), which provides a cumulative list of federal income tax exempt organizations registered in the state of Colorado.<sup>8</sup> These data were merged with nationwide Form 990 extract data<sup>9</sup>, including data from Forms 990, 990-EZ (short form), and 990-PF (private foundations). Available data were compiled for forms filed in calendar years 2017 through 2022. At the time of analysis, only partial data were available for tax year 2022 and Form 990-PF extracts were only available for filings during calendar years 2020 and 2021, proving comprehensive data for tax year 2019 and partial data for other years.

Detailed Colorado Department of Labor and Employment (CDLE) Quarterly Census of Employment and Wages (QCEW) data were used to estimate employment and labor income. Using Employer Identification Numbers (EINs), QCEW data were mapped to Colorado IRS EO BMF and nationwide Form 990 data to identify employment activity in the state.

To supplement IRS and QCEW data, a survey of Colorado nonprofits was conducted in the fall of 2023, during which 722 respondents completed the survey. Respondents were asked a series of questions about nonprofit operations in and outside of Colorado, financial capacity, and

<sup>8</sup>IRS EO BMF data and documentation are available at: <https://www.irs.gov/charities-non-profits/exempt-organizations-business-master-file-extract-eo-bmf>

<sup>9</sup> IRS 990 extract data and documentation are available at: <https://www.irs.gov/statistics/soi-tax-stats-annual-extract-of-tax-exempt-organization-financial-data>

employment. Survey data were used to estimate volunteer hours, to cross-verify information from other data sources, and to provide additional context to nonprofit economic impacts.

IMPLAN multipliers were used to estimate *indirect* and *induced* economic impacts. This analysis employs the most recent 2022 release of IMPLAN regional data for Colorado.

**Data and modeling assumptions.** The research team was cognizant of data issues that may overstate the economic contribution of nonprofits to the state of Colorado. Specifically, analysis of direct spending was limited to independent, non-foundation economic activity, while Colorado employment and wage (labor income) impacts were included for all nonprofits identified.

Non-independent nonprofits include nonprofits with multi-state operations. Outlays from some of those nonprofits may leak out of Colorado to other states, reducing the in-state economic contribution. Additionally, many foundations provide grants directly to nonprofits, which then spend the foundation grants to fulfill their mission and operations. Counting the foundation grants to nonprofits and the nonprofit spending poses a risk of double-counting economic activity. To mitigate leakage and double counting, the IRS nonprofit data were segmented into four groups for the analysis: independent nonprofits, non-independent nonprofits, independent foundations, and non-independent foundations.

The *independent* nonprofit analysis used expenditures reported in Form 990 data and estimated employment and wages using QCEW data. All data were modeled by industry and by Congressional District. To model industry-specific impacts using IMPLAN, IRS EO BMF and Form 990 data includes EINs for nonprofits. EINs were cross-referenced with organizations' North American Industry Classification System (NAICS) codes, either based on QCEW data or a mapping between NAICS and NTEE codes.

The *non-independent* nonprofits were also modeled by industry and used only the organizations' in-state employment and wages based on QCEW data. Form 990-reported revenue and expenditures were excluded from analysis to eliminate spending that may occur outside of Colorado. This approach incorporates known in-state activity to estimate employment-related operations expenditures, while excluding sources of spending more likely to occur outside of the state.

Similarly, the *foundations* (both independent and non-independent) were modeled based on Colorado QCEW employment and wages, capturing foundation spending on labor income, while reducing potential double-counting of grants by excluding Form 990-reported expenditures from analysis. Foundations were modeled using multipliers for the Other Services sector, which includes grantmaking and giving services. Foundations were identified based on IRS EO BMF indicators and those filing Form 990-PF.

Only private-sector organizations were included in the analysis of economic impacts. Governmental organizations (e.g., public education organizations such as charter schools, or university hospitals) were excluded using available identifiers from the IRS EO BMF and by excluding employers identified in the QCEW as government. Duplicate estimates for organizations (e.g., organizations who filed amended returns resulting in multiple data points for the same tax year) were removed and the most recent filing data was used.

QCEW data reported in this analysis are adjusted to ensure compliance with data confidentiality requirements.

## Appendix B: Detailed Tables

The following presents detailed tables, including a regional summary of direct economic impacts by asset category and NTEE category, and multi-year estimates for total economic impacts. All data represent estimates of Colorado nonprofit economic activity.

Table B-1 presents data for all nonprofits for which data was available and could be mapped across the Colorado IRS EO BMF and nationwide Form 990, 990-EZ, and 990-PF data.

Tables B-2 through B-17 present the population of nonprofits used in analysis, which is limited to private independent Colorado foundations. Other data limitations are noted in table footnotes.

Source: Authors' estimates based on CDLE QCEW data mapped to IRS EO BMF and Form 990, 990-EZ, and 990-PF data.

\*Includes employment for all nonprofits with covered employment identified in either the IRS Colorado EO BMF or Form 990 data for all states.

Note: Nonprofit employment is rounded to the nearest 10 jobs and amounts less than 25 are not reported to ensure compliance with data confidentiality requirements. Location data are based on the address of the nonprofit. The actual location of economic activity may differ. County employment does not sum to the statewide total because a portion of employment is not classified by county.

\*Limited to independent non-foundations nonprofits. Includes direct, indirect, and induced impacts.

\*\*Amounts exclude value added from volunteerism.

**Table B-17. Nonprofit Share of Employment & GDP by Congressional District, 2021\***  
Dollars in Millions

<b>Asset Category</b>	<b>CD1</b>	<b>CD2</b>	<b>CD3</b>	<b>CD4</b>	<b>CD5</b>	<b>CD6</b>	<b>CD7</b>	<b>CD8</b>	<b>Statewide</b>
Total Employment <sup>1,2</sup>	516,893	434,708	260,160	180,414	286,391	328,194	335,027	335,062	2,699,891
Nonprofit Supported Jobs	62,909	34,907	37,336	9,311	32,340	47,714	29,073	8,426	262,017
Share of Total Employment	12.2%	8.0%	14.4%	5.2%	11.3%	14.5%	8.7%	2.5%	9.7%
Total GDP <sup>1</sup>	\$97,669	\$70,351	\$38,817	\$31,112	\$43,776	\$55,483	\$52,122	\$57,721	\$447,051
Nonprofit Value Added <sup>3</sup>	\$6,753	\$3,178	\$2,928	\$762	\$2,700	\$5,152	\$2,778	\$755	\$25,006
Share of Total GDP	6.9%	4.5%	7.5%	2.4%	6.2%	9.3%	5.3%	1.3%	5.6%

Source: U.S. Bureau of Labor Statistics; U.S. Bureau of Economic Analysis; Authors' estimates using IMPLAN and based on CDLE QCEW, IRS EO BMF, and Form 990, 990-EZ, and 990-PF data.

\*Includes direct, indirect, and induced impacts.

<sup>1</sup>Total GDP and employment estimates are based on county-level data mapped to Congressional Districts.

<sup>2</sup>Congressional District employment does not sum to the statewide total because a portion of state employment is not classified by county.

<sup>3</sup>Amounts exclude value added from volunteerism.
